Business registration no.: 0319020106

✦ Clean • Transparent • Sustainable ✦

SCIENTIFIC FOUNDATION BEFORE EXPANSION

RESEARCH • CULTIVATION • QUALITY

6

YEARS

Research and
foundation

3

YEARS

Expansion and
market readiness

For 6 years, Aurora Valley's agricultural and technical engineering team, alongside our partners, has focused on three core pillars:

- **Pepper Variety Research and Selection:** Evaluating growth habits, fruit-setting capacity, pungency, yield, uniformity, and adaptability to regional soil and climate conditions.
- **Monitoring Key Pepper Pests and Diseases:** Tracking thrips, fruit worms, red spider mites, mealybugs, anthracnose, bacterial wilt, leaf curl, and nematodes; developing early-detection, preventive, and biological management protocols.
- **Standardizing Clean Farming Protocols:** Integrating nutrient management, irrigation control, field sanitation, post-harvest soil treatment, and microbial solutions to minimize pest risks.

The most critical outcome is that Aurora Valley has determined that clean pepper cultivation is entirely feasible with a synchronized protocol: suitable varieties, healthy soil, optimized water usage, protected natural enemies, and source-controlled lot quality. Practical experience in Long Phước also demonstrates that clean peppers can achieve organic certification and meet the standards of demanding export markets.

Sacrifice to Create Soil Value

3 YEARS:

For 3 years, Aurora Valley surveyed the geology, soil composition, water sources, and climatic characteristics of prospective regions to select locations capable of maintaining stable production, mitigating weather risks, and meeting export standards for clean peppers.

Đồng Nai features a tropical monsoon climate with an average year-round temperature of 25 - 27°C, abundant sunlight, and distinct dry and rainy seasons - favorable conditions for tropical crops. However, climate change increases the risks of droughts, concentrated rainfall, localized flooding, and pest outbreaks. Long Phước must be designed with well - drained raised beds, water-saving irrigation, and a flexible seasonal schedule to adapt to both seasons.

Đồng Nai already has experience applying water-saving irrigation across approximately 7,000 hectares, saving about 40% of irrigation water while promoting eco - friendly VietGAP and GlobalGAP standards. This serves as an important foundation for Aurora Valley to build its clean pepper zone in Long Phước, oriented toward climate resilience and quality control.

Sacrifice to Create Soil Value:

For Aurora Valley, "sacrifice" does not mean moving fast at all costs; rather, it is accepting long-term investment, discipline, and choosing the harder path to protect the soil, water resources, and farming environment. The company limits its reliance on chemical pesticides, prioritizes the restoration of soil biodiversity, establishes vegetative buffer zones to attract natural enemies, and revitalizes the soil after each season to reduce accumulated pathogen sources.

This is how Aurora Valley creates real value for the land: the soil is not degraded by overexploitation, but gradually becomes loose, nutrient-rich, better at retaining moisture, and highly resilient to climate change. In Long Phước, the application experience of Arbuscular Mycorrhizal Fungi (AMF) in clean pepper cultivation has demonstrated that a biological approach can help plants develop strong roots, limit damage caused by pathogens and nematodes, and simultaneously improve soil fertility.

04

LONG PHUOC CLEAN PEPPER ZONE

Aurora Valley Co., Ltd. has established Long Phước, Đồng Nai as the development center for its clean pepper cultivation zone under the "Clean Pepper 2027–2030" project. This is built upon a foundation of 6 years of research into pepper varieties and pest management, combined with 3 years of geological, soil, and climatic surveys across prospective regions. Vietnam features a tropical monsoon climate and diverse soil profiles, which are favorable for year-round pepper cultivation. The Southeastern region (Miền Đông Nam Bộ) stands out as having high potential for developing stable, high-quality peppers geared toward export. However, peppers are sensitive to pests and diseases—particularly thrips, fruit worms, red spider mites, mealybugs, bacterial wilt, anthracnose, leaf curl, and nematodes. Consequently, a clean pepper zone can only be established through the synchronized control of varieties, soil, water, farming protocols, and pest management.

VISION FOR THE FUTURE. ROOTED IN THE EARTH.

“ Clean earth, clean crops; green living, peaceful life ”

VISION

Developing a global value chain for clean agricultural production and supply, aiming to deliver 'Safe food and wholesome health' to the community. Guided by the motto: From 'clean' farms to 'green' meals

MISSION

Actively contributing to humanity's sustainable green era through environmentally friendly farming methods, soil regeneration, and water resource protection. Guided by the motto: 'Green Earth - Prosperous Living'

WHY DID AURORA VALLEY CHOOSE LONG PHUOC?

LONG PHƯỚC WAS CHOSEN AS THE CENTER FOR DEVELOPING AURORA VALLEY'S LARGE-SCALE PEPPER PRODUCTION ZONE BECAUSE IT CONVERGES ALL NECESSARY TECHNICAL, COMMERCIAL, AND INFRASTRUCTURAL ADVANTAGES:

CLEAN EARTH, CLEAN CROPS; GREEN LIVING, PEACEFUL LIFE

Criteria & Advantages

Advantages at Long Phước

Farming Experience

The region already features organic pepper models, applies AMF (Arbuscular Mycorrhizal Fungi), and achieves certified organic products.

Export Markets

Organic pepper products from this area have been exported to Germany, France, and Sweden.

Technical Team

Possesses a foundation of agri-forestry engineers and practical experience in operating high-tech agricultural models.

Soil & Environment

Biological processes help regenerate soil, increase fertility, reduce pollution, and enhance plant resilience.

Climate

The tropical climate is suitable for pepper cultivation, though drought-resistant and drainage designs are required to adapt to climate change.

Provincial Orientation

Dong Nai province is currently orienting the development of high-tech agriculture for the 2026–2030 period.

KEY PRODUCT PORTFOLIO

FRESH PRODUCE

- Bird's Eye Chilli
- Horn Pepper
- Finger Chilli
- Specialty Chilli
- Specification: With stem / Stemless

PROCESSED PRODUCTS

- IQF Frozen Chilli
- Salted Chilli / Brined Chilli
- Chilli Powder
- Dried Chilli / Dehydrated Chilli

CUSTOM –

OEM / ODM /
Private Label

Flexible packaging and product specifications for B2B partners.

QUALITY & MARKET ACCESS
